

G149 Gagner contre le hasard

CHANCES pour Zig de gagner CONTRE le hasard : modélisation

Les points répondant au problème de coordonnées entières b_1, b_2, b_3 avec

($b_1 \leq b_2$) ET

$b_3 = 2016 - b_1 - b_2$ avec $b_3 \geq b_2$,

sont situés dans la lentille grise transparente en haut du triangle coloré des possibilités de jeux.

Les *limites de la lentille*, dont les chances de gagner sont de plus de 75% sont données par les couples à coordonnées entières, qui suivent :

[381,817] , [382,816] , [383,815] , [384,813] , [385,812] , [386,811] , [387,810] , [388,809] , [389,807] ,

Dans cette zone, on dénombre 2310 solutions donnant plus de 75% de chances de réussite. On peut choisir les 100 meilleures qui d'ailleurs excèdent toutes 76 %.

Les 100 meilleures solutions avec leur pourcentage sont les suivantes :

(466,775) --> 76.7629794973545
